

Dear Visitors!

Welcome to our interactive website!

We are very pleased to inform you the Hungarian Maize Club Association (hereafter: Club) started its activity in 2006. This is a true civil organization in the area of agriculture. Although the name is national, the Club's activity is international. According to the Constitution of Association members and supporters are welcome from all over the world.

The Club has currently 121 members from the area of production, trade, universities, research institutes, media, companies and the civil sphere.

The aim of the Club is to provide independent and reliable information to anybody interested in corn business, environmental questions and the social and cultural life related to corn.

The Clubs has been initiated to exchange information on the Internet and involve as many people as possible into the interactive communication, regardless of which country they live in.

Corn is grown in Hungary on an average of than 1.2 million hectares, which equals 25% of the domestic arable land. Its impact is considerable on business, rural and cultural life and on the environment. While the majority of inputs comes from import, the production is deeply export dependent.

There is no doubt independent information has its significance both on national and international level.

We are very pleased to invite your kind attention to our special programs in the frame of AgrInfo Trial, Certification, and Communication System and started in 2007:

- “Top20” Small Plot Replicated Variety Trials for corn hybrids listed in the National and EU Plant Variety Lists and candidates for registration
- Corn Yield Contest, started in 2009 with the aim to involve as many farmers as possible in a common activity to search for the possibilities an opportunities of corn production throughout the Carpatic Basin (Hungary and the surrounding countries) in strictly controlled conditions
- Yield Certification, an activity supports farmers, breeders and input companies to communicate more reliable, credited data about their products and help them to evaluate their field strip trials
